The present sequence is given in a specification relating to an isolated nucleic acid molecule encoding a platelet membrane glycoprotein receptor glycoprotein vi (GeVI), also called TNMGO 268. The GPVI polymucleotides and polypeptides and their modulators, e.g. antisense nucleic acids, ribozymes and antibodies, are useful for preventing, treating and aliagnosing disorders associated with aberrant expression or activity of GPVI. These disorders include bleeding disorders (e.g. thrombocytopaenia), blood vessel injury, thrombotic disorders (e.g. thrombotic occludation of the coronary arteries), hemomerapic disorders, coronary artery and cerebral artery diseases (e.g. stroke and ischaemia) cardiovascular diseases (e.g. atherosclerosis and myocardial infarction), mimunological diseases (e.g. platelet disorder) and embryonic liver disorders. Preferably they are used to prevent acture cardiac ischaemia following angioplasty and metastatic cancers, especially of the colon and

Novel substantially purified antibody immunospecifically binding to TANGO 268 antigen, useful for treating bleeding disorders such as thrombocytopenia, stroke, ischemia, pulmonary embolism, atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention relates to a novel purified antibody comprising a variable heavy (WH) complementarity determining region (CDR)1, WH CDR2 or WH CDR3, or variable light (VL) CDR1, VL CDR2 or VL CDR3, and immunospecifically binding to a TANGO 268 (also referred as glycoprotein VI (GPVI)) antigen. The antibodies of the invention act to decrease or block TANGO 268 inding to extracellular matrix componente, or as a Collagen or platelet release and aggregation blocker. The antibodies of the invention are useful for modulating proliferation, migration, morphology,

differentiation and/or function of megakaryocytes and platelets, including during development e.g. embryogenesis, modulating leukccyte-platelet and platelet-endothelium interactions in inflammation and/or thrombosis, and modulating platelet aggregation and degranulation. They are also useful for modulating disorders associated with abnormal or aberrant megakaryocyte and/or platelet proliferation, migration. They are also useful for modulating disorders associated with abnormal or as thrombocytopaenia. Other diseases which may be modulated by these antibodies are thrombocic disorders, crebral vascular diseases (e.g. articodies are thrombocic disorders, crebral vascular diseases (e.g. cronary diseases) (e.g. cradiovascular diseases including angina pectoris, myocardial infarction, coronary restenosis, atherosclerosis, cetc); immunological disorders, developmental disorders, embryonic disorders, crebral vascular diseases, venous chromboembolism disease, coronary diseases, and metastatic cancers. The thromboembolism disease, coronary diseases, and metastatic cancers. The antibodies of the invention only causes a transient decrease in platelet aggregation, and/or platelet activation and so have some cours, platelet aggregation, and/or platelet sequence represents a devantages over prior art methods. The present sequence represents a peptide sequence used to generate the antibodies of the invention 8X8888888888888888888888888888888888

New leukocyte immunoglobulin receptor-like (LIR-like) polynucleotides and polypeptides, useful in research, as nutritional sources, or for treating wounds, Alzheimer's disease, inflammations, infertility, stroke or cancers

Example 5; Page 213; 215pp; English.

The present invention provides the protein and coding sequences of human leukocyte immunoglobulin receptor-like molecules. These can be used as mutritional sources or supplements, or for treating myeloid or lymphoid disorders, burns, wounds, ulcars, Alzheimer's disease, amyotrophic lateral sclerosis, lung or liver fibrosis, immune disorders such as severe combined immunodeficiency, multiple sclerosis, allergies, graft-versus-host disease, inflammations, infertility, stroke, or cancers the present sequence is a polypeptide described in the exemplification of the invention

The complex is useful for treating pathologies associated with viral infections (e.g. infections caused by influenza virus, HIV. Epstein-Barr virus, cytomegalovirus, vaccinia virus, ECMV, MWM or herpes virus) and cancer (e.g. carcinomas, melanomas, lymphomas and sarcomas), and for the imaging and monitoring of cancer. The complex may also be used to detect the presence of abnormal cells in a sample. The antibodies can be used to qualitatively or quantitatively detect the ligand for the complex. The present sequence is human NKp46 (isoform b) protein
                                                                                                                                                                                                                                                                                                                                          target cell, comprising a target recognition segment and an active segment, useful for treating pathologies associated with viral infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             46 RYQDQAVLFIPAMKRSLAGRYRCSYQNGSLWSLPSDQLELVATGVFAKPSLSAQPGPAVS 105

                                                                                                                                                                    ABG10157
                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes an isolated human PRO polypeptide (I).

Also described: (I) an isolated PRO nucleic (II) acid encoding (I); (2) a vector (III) comprising (III); (3) a host cell (IV) comprising (III); (4) producing (I); (5) a chimeric molecule (V) comprising (III); (4) producing (I); (5) a chimeric molecule (V) comprising (II) thesed to a cherrologous amino acid sequence; (6) an antibody (VI) which specifically binds to (I); (7) a composition of matter comprising (I), an agonist of (I), an antegonist of (I), in combination with a carrier; (8) creating (MI) an immune related disease in a mammal, by administering (I), an agonist of (I), an antegonist of (I), or the antibody (VI); (9) diagnosing an immune related disease in a mammal, by detecting the level of expression of a gene encoding (I) in a test sample of tissue cells obtained from the mammal and in a control sample of tissue cells obtained from the mammal and in a control sample of tissue cells obtained from the mammal and in a control sample of that inhibits the cativity of (I); (11) identifying a compound (M2) that inhibits the expression of a gene encoding (I); (12) identifying a compound that inhibits the cativity of (I); (11) identifying a compound (M2) that inhibits the cativity of (I); (11) identifying a compound (M2) that inhibits to mammal, by administering (I) or its antagonist to the mammal. (I) has antitanaemic, antiarthritic, antiinflammatory, antipsoriatic, antiarthritic, antiinflammatory, introsuppressive, categorosing an inflammatory immune related disease in a mammal. (VI) is useful for diagnosing an inflammatory immune response in a mammal. (VI) is useful for the polypoptide. (MI) is useful for treating mammal having an immune control archivities. (I) in a sample suspected of containing the presence of (I) in a sample suspected of containing the presence of the polypoptide chisomer from the unammal. (VI) are electrations. In the mammal and incorder the mammal having an immune related dispose in a mammal and archivitic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          diseases including bullous skin diseases, erythema multiforme and contact dermatitis, psoriasis, lymphadenopathy, splenomegaly and leukopaenia. The present sequence represents a human PRO protein from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     52 VLFIPAMKRSLAGRYRCSYQNGSLWSLPSDQLELVATGVFAKPSLSAQPGPAVSSGGDVT 111

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal crivity of (II) or to treat disease states involving (II). (II) is useful in tissue, as molecular weight markers and as a food polypeptide in tissue, as molecular weight markers and as a food of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations contained by the polymucleotide sequences have application of mutations and polymucleotides or other trails to assess bliddiversity and assessible for genetic disorders or other trails to assess the part of the polymucleotide sequences have application of mutations and polymucleotides or other trails to assess the part of the polymer of the polymer of the polymer of the polymer or place the polymer or part of the polymer or place the place of the polymer or place the polymer or place the polymer or place the place of the polymer or place the polymer or place the place of the place or place the place of the place or place or place or place the place or place or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               41; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Length 170;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Indels

leukocyte immunoglobulin receptor-like molecules. These can be used as untritional sources or supplements, or for treating myeloid or lymphoid disorders, burns, wounds, ulcers, Alzheimer's disease, amyotrophic lateral sclerosis, lung or liver fibrosis, immune disorders such as evere combined immunodaticiency, multiple sclerosis, allargies, graft-versus-host disease, inflammations, infertility, stroke, or cancers. The present sequence is a polypeptide described in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               and

The medicament comprising GPVI is useful for treating vascular disease, and for reducing platelet activation which involves contacting platelets with the medicament. The extracellular portion of GPVI is used therapeutically to attenuate platelet activation and aggregation and to treat thrombosis and other vascular diseases. Antibodies generated against GPVI are used as research and immunotherapeutic agents

The present sequence is given in a specification relating to an isolated nucleic acid molecule encoding a platelet membrane glycoprotein receptor glycoprotein VI (GPVI), also called TANGO 268. The GPVI polymuclectides and an anolation of the construction of the construction of the construction of diagnosing disorders associated with aberrant expression or activity of diagnosing disorders associated with aberrant expression or activity of cyvi. These disorders include bleeding disorders (e.g. thrombotic occlusion of the coronary arteries), haemorrhagic disorders, thrombotic occlusion of the coronary arteries), haemorrhagic disorders, coronary artery and cerebral artery diseases (e.g. stroke and ischaemia), cardiovascular diseases (e.g. atheroscierosis and myocardial infarction), immunological diseases (e.g. platelet disorder) and embryonic liver disorders. Preferably they are used to prevent acture cardiac ischaemia
                                                                                          Human, TANGO 268, cardiant, cerebroprotective, cytostatic; anticoagulant, thrombolytic; antiarteriosclerotic; haemostatic; glycoprotein VI; GPVI; platelet membrane glycoprotein receptor; bleeding disorder; blood vessel injury; thrombotic disorder; haemorrhagic disorder; stroke; ischaemia; cardiovascular disease; immunological disease; liver disorder;

The medicament comprising GPVI is useful for treating vascular disease, and for reducing platelet activation which involves contacting platelets with the medicament. The extracellular portion of GPVI is used therapeutically to attenuate platelet activation and aggregation and to treat thrombosis and other vascular diseases.

Antibodies generated against GPVI are used as research and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 variant,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Anti-thrombotic medicament, comprising a polypeptide having the extracellular domain of platelet membrane glycoprotein VI or its variant useful for treating a vascular disease and reducing platelet activation.
                                                                                                                                                                                                                                                                                                                                                Human; platelet membrane glycoprotein VI; GPVI; thrombolytic; therapy; vascular disease; thrombosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention relates to a novel purified antibody comprising a variable heavy (VH) complementarity determining region (CDR), VH CDR2 or VH CDR3; or variable light (VL) CDR1, VL CDR2 or VL CDR3, and immunospecifically controlled to a TANGO 268 (also referred as glycoprotein VI (GPVI)) antigen. The antibodies of the invention act to decrease or block TANGO 268 binding to extracellular matrix components, or as a Collagen or platelet release and aggregation blocker. The antibodies of the invention are cuseful for modulating proliferation, migration, morphology, differentiating development e.g. embryogenesis, modulating leukocyte-cortect and platelet endothelium interactions in inflammation and/or thrombosis, and modulating platelet aggregation and degranulation. They are also useful for modulating disorders associated with abnormal or characteriation and/or function, e.g. bleeding disorders such as thrombocytopeania. Other diseases which may be modulated by these artibodies are thrombotic disorders, cerebral vascular diseases (e.g. diseases coronary diseases (e.g. diseases including angina coronary diseases (e.g. deathowscular diseases including angina pectoris, myocardial infarction, coronary embronic coronary diseases (e.g. diseases venous thrombocytopeania) and ulceration, pulmonary embolism, etc); cetc); immunological disorders, developmental disorders, embryonic coronary diseases (e.g. disorders, developmental diseases venous etc); thrombombolism diseases (e.g. derebral vascular diseases venous etc); thrombombolism diseases and diseases venous etcoris, who can be modulated by the etcoris in diseases venous etcoris etcoris.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel substantially purified antibody immunospecifically binding to TANGO 268 antigen, useful for treating bleeding disorders such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Lirromboembolism disease, coronary diseases, and metastatic cancers. The antibodies of the invention only causes a transient decrease in platelet counts, platelet aggregation, and/or platelet activation and so have some
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         268 antigen, useful for treating bleeding disorders such as
thrombocytopenia, stroke, ischemia, pulmonary embolism, atherosclerosis.
                                                                                 complementarity determining region; TANGO 268; glycoprotein VI; GPVI; TANGO 268; extracellular matrix; collagen; platelet release; proliferation; migration; embryogenesis; inflammation; thrombosis; degranulation; thrombocytopaenia; antibody; thrombotic disorder;
                                                                                                                                                                                                        cerebral vascular disease; stroke, ischaemia, venous thromboembolism, leg swelling; pain, ulceration; pulmonary embolism; coronary disease; cardiovascular disease; angina pectoris; myocardial infarction; coronary restenosis, atherosclerosis; immunological disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      counts, platelet aggregation, and/or platelet activation and so have advantages over prior art methods. The present sequence represents a peptide sequence used to generate the antibodies of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Vainchencker W;

The present invention provides the protein and coding sequences of human leukocyte immunoglobulin receptor-like molecules. These can be used as nutritional sources or supplements, or for treating myeloid or lymphoid disorders, burns, wounds, ulcars, Alzheimer's disease, amyotrophic lateral sclerosis, lung or liver fibrosis, immune disorders such as severe condined immunodeficiency, multiple sclerosis, allergies, graft-versus-host disease, inflammations, infertility, stroke, or cancers. The present sequence is a polypeptide described in the exemplification of the

'n,
The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foctal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                        The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AA157546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Protein #8005 encoded by probe for measuring heart cell gene expression.
Peptide #10519 encoded by probe for measuring placental gene expression
                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart (see ABA121852-ABA41305). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Single exon nucleic acid probes for analyzing gene expression in human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                91 FAKPSLSAQPGPAVSSGGDVTLQCQTRYGFDQFALYKEG---DP----APYKNPERWYRA

                                                                                                                                                                                                                                                                          ų,
                                                                                                                                                              The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention
                                                                                                                                                                                                                                                                                             143

                                                                                                                                          The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain call samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of

stringency to a nucleic acid molecule expressed in the human adult liver.

(I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is associated with coronary heart disease. ABG47348-ABG59930 represent human liver single exon encoded peptides of the invention. Note: The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly from WIPO at from it pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  91 FAKPSLSAQPGPAVSSGGDVTLQCQTRYGFDQFALYKEG---DP----APYKNPERWYRA 143

uncleic acid probes for measuring gene expression in a sample derived crom huncleic acid probes for measuring single expensable betwing one of 12614 nucleic acid probes for measuring single expensable bed probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 1287 open reading frames derived from the 12614 probes which hybridise at high stringency to a nucleic complements or the page which hybridise at high stringency to a nucleic complement from human lung, measuring gene expression in a sample derived from human lung, comprising (a) contacting the array with a collection of derectably labeled nucleic acids derived from human lung minkh, and (b) measuring the label detectably bound to each probe of the array; identifying exons in a least one exon from genomic sequences of the extension is a fagment identical to the predicted exon, the probe is included in the above mentioned microarray; assigning exons to a single exon probe. In the above mentioned microarray; assigning exons to a single exon probe in the above mentioned microarray; assigning exons to a single exon probe. Omprising (a) identifying exons from genomic sequence by the method in the above mentioned microarray; assigning exons to a single exon probe in the exons should be assigned to a single gene; a peptide comprising on the exons should be assigned to a single gene; a peptide comprising on a cramen ground for identifying exons in a gene; particularly using human corbs and for identifying exons in a gene; particularly using human corbs. The probes are used for gene expression analysis, and for identifying exons in a gene; particularly using human corbs. The probes are used for decrease (ILD), familial idiopathic pulmonary disease (COPD), interstitial lung cancer, chronic obstructive pulmonary disease (COPD), interstitial lung cancer, chronic obstructive pulmonary disease (ILD), familial idiopathic pulmonary disease (ILD), familial idiopathic pulmonary dysplasia, prined sequence is a peptide/pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                91 PAKPSLSAQPGPAVSSGGDVTLQCQTRYGFDQFALYKEG---DP----APYKNPERWYRA 143

The present sequence is given in a specification relating to an isolated nucleic acid molecule encoding a platelet membrane glycoprotein receptor glycoprotein VI (GPVI), also called TANGO 268. The GPVI polymucleotides and polypeptides and their modulators, e.g. antisense nucleic acids, ribozymes and antibodies, are useful for preventing, treating and diagnosing disorders associated with aberrant expression or activity of GPVI. These disorders include bleeding disorders (e.g. thrombocytopaenia), blood vessel injury, thrombotic disorders (e.g. thrombotic occlusion of the coronary arteries), haemorrhagic disorders, coronary artery and cerebral artery diseases (e.g. stroke and ischaemia), cardiovascular diseases (e.g. platelet disorder) and embryonic liver disorders. Preferably they are used to prevent acture cardiac ischaemia following angioplasty and metastatic cancers, especially of the colon and
                                                                                                                                                                                                                                                                                                                            New genes encoding human platelet-expressed collagen receptor, glycoprotein VI, and its modulators, useful for preventing, treating and diagnosing hemorrhagic disorders, thrombotic diseases and immunological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; mouse; variable heavy; VH; antigen; cancer; complementarity determining region; TANGO 268; glycoprotein VI; GPVI; TANGO 268; extracellular matrix; collagen; platelet release; probleteration; migration; embryogenesis; inflammation; thrombosis; degranulation; thrombocytopaenia; antibody; thrombotic disorder; cerebral vascular disease; stroke; ischaemia; venous thromboembolism; leg swelling; pain; ulceration; pulmonary embolism; coronary disease; angina pectoris; myocardial infarction; coronary restenosis; atherosclerosis; immunological disorder; developmental disorder; embryonic disorder; inver disorder; derebral vascular disease; venous thromboembolism disease.

This invention relates to a novel purified antibody comprising a variable heavy (VH) complementarity determining region (CDR)1, VH CDR2 or VH CDR3; or variable light (VL) CDR1, VL CDR2 or VL CDR3, and immunospecifically binding to a TANGO 268 (also referred as glycoprotein VI (GPVI)) antigen. The antibodies of the invention act to decrease or block TANGO 268 binding to a TANGO 268 (also referred as glycoprotein VI (GPVI)) antigen. The antibodies of the invention are release and aggregation blocker. The antibodies of the invention are cuseful for modulating proliferation, migration, morphology, differentiation and/or function of megakaryocytes and platelets.

CC including during development e.g. embryogenesis, modulating leukocyte-platelet and platelet-endotholium interactions in inflammation and/or thrombosis, and modulating platelet aggregation and degranulation. They are also useful for modulating disorders associated with abnormal or aberrant megakaryocyte and/or platelet proliferation, migration, corpused and/or platelet proliferation, migration, as thrombocycopenia. Other diseases which may be modulated by these antibodies are thrombotic disorders, cerebral vascular diseases (e.g. diseases (c.g. caronary diseases (e.g. cardiovascular diseases including angina coronary diseases (e.g. cardiovascular diseases including angina pectoris, myocardial infarction, connary restenosis, atherosclerosis, cetc); immunological disorders, developmental diseases, venous environmental diseases, venous environmental diseases and mersers of the diseases and mersers and exercise Theorems.
                                                                                                                                                                                                                                                                                                                                                    Novel substantially purified antibody immunospecifically binding to TANGO 268 antigen, useful for treating bleeding disorders such as thrombocytopenia, stroke, ischemia, pulmonary embolism, atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          thromboembolism disease, coronary diseases, and meteatic cancers. The antibodies of the invention only causes a transient decrease in platelet counts, platelet aggregation, and/Or platelet activation and so have some advantages over prior art methods. The present sequence represents a peptide sequence used to generate the antibodies of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          168
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   QAVLFIPAMKRSLAGRYRCSYQNGSLWSLPSDQLELVATGVFAKPSLSAQPGPAVSSGGD 109
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      141
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           196
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a novel isolated immune response associated protein (IRAP) comprising any of 35 fully defined sequences given in the specification. The polypeptide of the invention demonstrates antiarteriosclerotic, cytostetic, neuroprotective, antiparkinsonian, hepatotropic, cerebroprotective, antinflammatory, nootropic and vasotropic activities and may be useful for treating a disease or condition associated with decreased expression or overexpression of functional immune response associated proteins, while the antibody is expression of its disease associated with the expression of disease, such as arteriosclerosis, cirrhosis, cancer, stroke, Alzheimer's disease, Parkinson's disease and Crohn's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               49
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated immune response associated proteins (IRAP) polypeptide and polynucleotide, useful for diagnosing and/or treating disorders with aberrant expression of IRAP, such as arteriosclerosis, cirrhosis, cancer and stroke.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Furthermore, the molecules of the invention may be utilised during gene therapy procedures. The current sequence is that of a human IRAP protein

The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human HeLea cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      91 PAKPSLSAQPGPAVSSGGDVTLQCQTRYGFDQFALYKEGDPAP----YKNPERWYRASF 145
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Peptide #2432 encoded by probe for measuring cervical gene expression.
